

Summary > Los Angeles-based engineer with 5+ years building and operating mission-critical, high-throughput, security-aware production systems. Bridging software and infrastructure, on-site and in the cloud, with approachable, pragmatic communication.

EXPERIENCE

Systems Engineer (Founder) > **Left Click** > Los Angeles, CA 2026 - Pres.

- Implemented cost-effective on-prem infrastructure to improve reliability, security, and accessibility, spanning NAS/RAID with backup, DNS, VPN, and reverse proxy, as well as reproducible Ansible/ArgoCD GitOps with monitoring and data workflows.
- Owned client operations end-to-end, from consultation and requirements gathering through procurement and handoff, as well as translating technical concepts in plain language to ensure effective delivery and customer satisfaction.

Software Engineer - Infrastructure > **Filmtools** > Burbank, CA 2022 - 2025

- Architected a proprietary cloud IaaS platform, virtualizing A5000 GPU compute to QEMU/KVM in Proxmox and automating VM orchestration and Active Directory IAM via PowerShell and libvirt, with Ceph storage, VLAN, and firewall in coordination with IT
- Developed a client-facing Node.js/Express.js REST API to provision and manage infrastructure, implementing request validation and statelessness, data sanitization, error monitoring, caching, and Auth0 OAuth SSO authentication.
- Engineered a high-throughput AWS and Selenium automation flow using SQS, EC2, and DynamoDB, programming fail-state detection, IP rotation, and exponential backoff, with on-prem write-validation to ensure reliable NetSuite synchronization.
- Expedited turnaround by an estimated 400 hours per year by automating vendor pricelist parsing via GPT-4 API and deploying a Flask web UI for internal data review, scheduling, and submission via the SuiteTalk REST API.
- Authored engineer-facing runbooks and user-facing manuals for seamless workflow adoption, in addition to collaborating with managers, leadership, and clients in identifying priorities, settling tradeoffs, and resolving production issues.

Platform Engineer > **University of Southern California** > Los Angeles, CA 2021 - 2022

- Served as primary technical consultant for USC's Scalar platform, gathering requirements from researchers and faculty, implementing features via JavaScript API extensions, and driving projects to production, improving publication throughput.
- Accelerated deployment by an estimated 30 hours/week and improved build reliability by implementing project-specific CI/CD tests and pipelines in GitHub Actions, including multi-scene layered workflows for Unity-engine repositories.

IT Support Specialist > **Fox Corporation** > Burbank, CA 2019 - 2021

- Interfaced with production teams via ticket queue and in-person coordination, conducting triage and delivering prompt incident resolution, ensuring continuous workflow for 300+ users across multiple productions in parallel.
- Maintained production data availability, executing asset recovery on Qumulo NAS and archival to Google Cloud.
- Administered Active Directory IAM and permissions, provisioned Google Workspace, Autodesk, and Adobe licenses, and managed endpoint imaging, inventory, deployment, and decommissioning through Mosyle MDM.

EDUCATION

Bachelor of Science > **Computer Science** > California State University Northridge 2018

SKILLS

Programming > Python, JavaScript, PowerShell, Bash

Cloud > AWS (EC2, SQS, DynamoDB, S3), Terraform

GenAI > OpenAI API, AI-assisted dev (Cursor, Copilot)

Backend > Node.js, Express, Socket.io, Flask, Redis, SQL, OAuth

Reliability > GitHub Actions, Kubernetes, Prometheus, Grafana

Virtualization > Proxmox, libvirt, QEMU, KVM, Docker, Podman
